

S45 ROLLER SHADE SERIES

The Rollease Acmeda S45 Series, unparalleled in design and aesthetics, comprises a range of roller shade systems which enable efficient installation and effortless operation for the end-user.

Several control solutions are provided in the S45 range to suit a variety of operating scenarios. They include the choice of spring system control, an innovative and patent-protected chain control, convenient and child-safe motorization or the heavy-duty advantage offered by the crank handle.

All S45 systems feature our Easy-Lock™ technology which allows for shade installation by a single installer. From idler to bracket, the 'locate and lock' process is simple and streamlined. Additionally, Easy-Lift spring boosters can be retro-fit to our S45 systems to further minimize the effort required by the end-user during operation.

Rollease Acmeda is also committed to supplying solutions that are complementary to sophisticated interiors and the S45 Series contributes to achieving a high-end look. Utilizing S45 components, minimal light gaps can be achieved and the slim and sleek bracket covers provide an aesthetically pleasing finish.

SYSTEMS

RB09 CHAINWINDER SYSTEM

The innovative RB09 Chainwinder System sets the benchmark for efficient installation of roller shades. The two-piece RB09 Chainwinder features a 'snap-lock' function for simplified assembly and the pin of the RB09 Extended Idler can be adjusted in 1mm increments to extend a further 10mm, therefore allowing for precise adjustments at the point of installation.

RB05 CRANK GEAR SYSTEM

With a gear ratio of 2.8:1, the RB05 Crank Gear System offers a reduction in the user effort required to operate manual roller shades. The RB05 Crank Gear is suitable for heavier shades and has the ability carry up to 20 lb. The crank control arm is detachable but can also be secured to a surface with an optional crank arm fixing support.

RB40 MOTORIZED SYSTEM

Realize the benefits of fabricating with the Rollease Acmeda S45 series and incorporate motorization into that offering. With our RB40 Motorized System, choose from a selection of crown and drive wheels as well as adaptors designed to be used with third party motors. Producing motorized roller shades that are up-to-date, child-safe and convenient is certainly achievable with our S45 Roller Shade series.

SYSTEM UPGRADES

CF90

Upgrade your S45 Roller Shades with our innovative CF90 cassette/fascia suite. Offering the choice of round or a square profiles, in either a fully enclosed cassette or partial fascia concealing the roller shade for a contemporary designer finish. The optional CF90 Edge light blocking side channels can also be added to achieve an improved blackout effect and contribute to improved household energy efficiency.

EASY LINK

Providing the perfect accompaniment to Rollease Acmeda's Easy-Lock™ technology, our Easy-Link™ upgrade enables multiple S45 series shades to be operated via a single control unit. Easy-Link™ also ensures a minimal light gap of 17mm between each shade. Aside from linking shades sitting side-by-side, Easy-Link™ can connect shades that need to be positioned at 90 degree angles.

SYSTEM OPTIONS

CHAINHOLD

Although all chain-operated roller shades require a tensioning device, utilizing Rollease Acmeda's Chainhold provides an added benefit. Unless properly installed, our latest Chainhold tension device will partially prevent the window covering from functioning, making it fully compliant with the ANSI/WCMA standard for safety.

DUAL BRACKETS

Rollease Acmeda's dual brackets allow for both sheer and blackout shades to be fixed onto one bracket. When compared with fitting two separate roller shades, using our dual brackets can improve the speed of installation and decrease the space required for the finished product. These brackets can be conveniently mounted on the ceiling or a wall and are compatible with our simple, two-step Easy-Lock™ installation method. The compact square design of the brackets keeps both control chains on the same side for improved accessibility.

WE DELIVER

With innovative know-how behind every design, Rollease Acmeda's dedicated team of R&D specialists, engineers and customer service staff deliver world-class hardware solutions to a global window furnishing market.

Built to last a lifetime, every product in our extensive range meets industry needs and has been tried and tested for unsurpassed performance and reliability.

Our global presence means that no matter where your business is located, Rollease Acmeda will respond to your needs quickly.

That's our precision in motion promise.
