

FASCIA 4" SKYLINE SYSTEM

The 4" Fascia offers a timeless and seamless decorative cover, which can be added to our popular roller systems, providing an elegant semi open fascia to hide a top roller mechanism. The link bracket enables using one motor for two different shades. With the 4" link bracket you can choose to cover the shades with one nice continuous fascia extrusion without a seam between the shades or with two separate shorter fascia extrusions. Sharing a control per fascia system to simultaneous operation of two shades. The fascia system provides durable hardware that lasts and offers numerous upgrades to suit the needs of various installation types. From the use of adjustable brackets and Link System, the 4inch Skyline Fascia System will ensure that the roller blind will operate as well as it looks.

AESTHETIC FEATURES

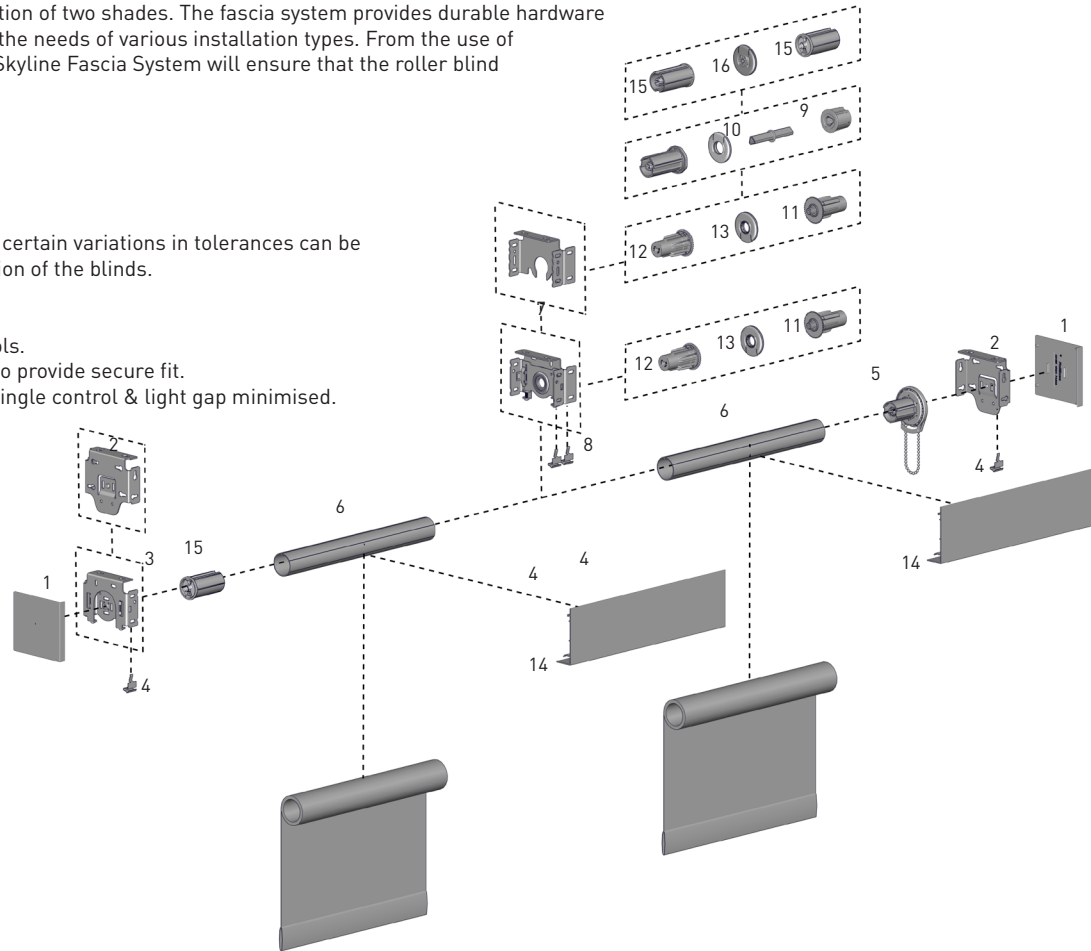

- Clean lines for contemporary aesthetic.

ASSEMBLY / INSTALLATION BENEFITS

- When using Adjustable Brackets (optional), certain variations in tolerances can be tweaked for smooth installation and operation of the blinds.

FUNCTIONAL BENEFITS

- Compatible with Skyline & Automate controls.
- Clip - accomodates variances in extension to provide secure fit.
- Link option - multiple shades operated by single control & light gap minimised.
